Public talk

Exotische Atome: Rosen aus dem Blumengarten der subatomaren Physik P. Kienle	3
---	---

Search for dense nuclear matter

Overview: Deeply bound nuclear states of pions and kaons T. Yamazaki	23
---	----

Deeply bound meson-nuclear states: Theoretical concepts and strategies W. Weise	35
--	----

Kaonic helium atoms in relation to kaonic nuclear bound states Y. Akaishi	45
--	----

Strange tribaryons as \bar{K} -mediated dense nuclear systems A. Doté	55
--	----

Kaonic deeply bound states, the first experimental results M. Iwasaki	63
--	----

Search for $ppnK^-$ deeply bound states with FOPI N. Herrmann	73
--	----

Proton induced reactions in search for kaonic nuclear clusters K. Suzuki	83
---	----

K^-pp search with FINUDA T. Nagae	91
--	----

K fragments S. Wycech	101
--------------------------------	-----

Pionic and kaonic atoms

Precision determination of the strong interaction shift and width in pionic hydrogen L. M. Simons	107
--	-----

Hadronic atoms in effective field theory and related aspects U. Meißner	117
Isospin violation in threshold πN scattering T. E. O. Ericson	129
Precision measurements with kaonic atoms – from DEAR to SIDDHARTA J. Zmeskal	139
Spectroscopy of pionic atoms with unstable nuclei K. Itahashi	149
DIRAC latest results M. Zhabitsky	155
Light pionic atoms – perspectives for precision experiments D. Gotta	165
The physical interest in Kd and $\bar{p}d$ atoms S. Wycech	175
Recent theoretical studies on hadronic atoms A. Ivanov	183
Low-energy $\bar{K}N$ interactions B. Borasoy	193
Measurement of kaonic nitrogen X-ray lines using the gaseous target at DAΦNE T. Ishiwatari	203
Kinetics of atomic cascade in pionic hydrogen T. Jensen	209
Electron population during the cascade of kaonic nitrogen atoms T. Koike	215
Hyperfine structure in pionic atoms: relativistic calculation M. Trassinelli	221

Neutron and muon physics

Measurement of a branching ratio of bound and continuum-state β^- decay C. Scheidenberger	229
--	-----

Direct measurement of charged particle EDMs C. J. G. Onderwater	239
Selected aspects of neutron decay S. Paul	249
New precision determination of g_p and G_F : the MuXperiments at PSI B. Lauss	259
New measurements of muon decay from <i>TWIST</i> G. M Marshall	269
Study of ortho-para effects on muonic-atomic and muonic-molecular processes in $dd\text{-}\mu\text{CF}$ H. Imao	279
The muonic hydrogen Lamb shift experiment R. Pohl	285

Low-energy QCD studies with antiprotons

Probing the nuclear medium by antiprotons H. Lenske	293
Antiprotonic atoms X rays A. Trzcińska	303

Novel instrumentation

Silicon drift detectors for hadronic atom research - SIDDHARTA M. Cargnelli	313
PANDA detector system H. Orth	321
Ultra-slow antiproton beam line – MUSASHI N. Kuroda	333
Characterization of the geometry of an array of CCD pixel detectors M. Trassinelli	343

Antiprotonic atoms & antihydrogen

Overview antiproton physics	
W. Oelert	351
CPT violation: Theory and phenomenology	
N. E. Mavromatos	361
Overview of the ASACUSA program	
R. S. Hayano	373
Recent results from ATHENA	
G. Bonomi	383
Precise spectroscopy of antiprotonic helium and sensitivity of transitions to the antiproton mass	
V. I. Korobov	391
Hyperfine structure of the spectrum of ultracold HD^+ ions	
D. Bakalov	401
Indication of the Wigner threshold law in collisions between antiprotonic helium and hydrogenic molecules	
B. Juhász	407

Future facilities

Japan Proton Accelerator Research Complex - J-PARC -	
S. Sawada	415
DAΦNE upgrade at LNF-INFN	
A. Gallo	423
Muon science in J-PARC	
N. Kawamura	433

Facility of Antiproton and Ion Research (FAIR) at GSI

FAIR: The GSI future project	
C. Schwarz	439

Hadron physics at FAIR - the PANDA antiproton experiment	
U. Wiedner	445
The Antiproton Ion Collider at FAIR	
L. Fabbietti	451
FLAIR, a Facility for Low-energy Antiproton and Ion Research	
E. Widmann	459
