

X. Index of tables

Table 3.1. Water content in different aboveground parts of five tree and shrub species	19
Table 3.2. Lignin and soluble phenolics composition of foliage and flower bud in five tree and shrub species	21
Table 3.3. Ratios of C, lignin and soluble phenolics to N for five tree and shrub species	22
Table 4.1. Total N, organic C and pH at different depths and positions from five tree and shrub species	28
Table 4.2. Effect of five tree and shrub species on soil attributes	29
Table 4.3. Exchangeable cations at different depths and positions from five tree and shrub species	31
Table 4.4. Correlations between selected soil attributes for the five tree and shrub species	34
Table 5.1. Comparison of mean height growth and height increment (m) for eight tree	41
Table 5.2. Aboveground dry-biomass of eight tree species evaluated at different months on a Vertisol area	43
Table 5.3. Foliage macronutrient content of eight tree species evaluated at different	44
Table 6.1. Mean height of seven tree species measured at different months on Nitosols at Holetta	51
Table 6.2. Mean dry biomass of seven tree species at different ages on Nitosols of Holetta	52
Table 6.3. Macronutrient contents of seven tree species 64 months after planting on Nitosols of Holetta	54
Table 7.1. Macronutrient and micronutrient composition of four tree species.....	61
Table 7.2. Foliage and flower bud nutritional value of four tree species.....	63
Table 7.3. Correlation coefficient (r) of the relationship between CP,.....	64
Table 7.4. Prediction of <i>in vitro</i> dry matter digestibility of tree foliage and.....	64
