

I. INTRODUCTION²⁸

During the excavations carried out in 1997 at Tell el-Dab'a/Avaris (Fig. 1) in the eastern Delta by the Austrian Archaeological Institute in Egypt under the direction of Manfred Bietak, another part of the 18th Dynasty palace-complex was uncovered at 'Ezbet Helmi (Figs. 2 and 3),²⁹ area H/III.

The New Kingdom complex was built above the Hyksos citadel. In the south-eastern part of this palace district, between the late Hyksos citadel (ph. D/2) and the early 18th Dynasty palace-complex (ph. D/1), two execration pits and a foundation deposit were found (Fig. 4).³⁰

Excration pit L1055 contained human skulls and fingers. Excration pit L1016, the most interesting feature discovered in this campaign, contained two human skeletons and a large amount of broken pottery on top of the bodies. Foundation deposit L1057 comprised a small collection of clay votive objects. One of them bore a hieratic inscription that was only partly preserved.

All of these loci belong to a transitional phase (D/1), dating to the beginning of the 18th Dynasty. L1055 was cut in a lower stratum (str. e/1.2) than L1016 immediately above (str. e/1.1), making it earlier than the latter. Nevertheless, there is a clear religious connection between the two excration pits, as well as a tie to the historical events that surround the occupation of the Hyksos city of Avaris by Ahmose.
