

Supplementary material

Supplement to: Singh, S. (2026). Fluidity in fertility timing intentions among childless men and women. *Vienna Yearbook of Population Research*, 24. <https://doi.org/10.1553/p-9jb3-a3h3>

Figure S.1 Transitions in responses on the realistic intended age at first childbirth over five years among individuals who were childless at the start of the interval, with flows shown for all age pairs (1991–1993 birth cohort).

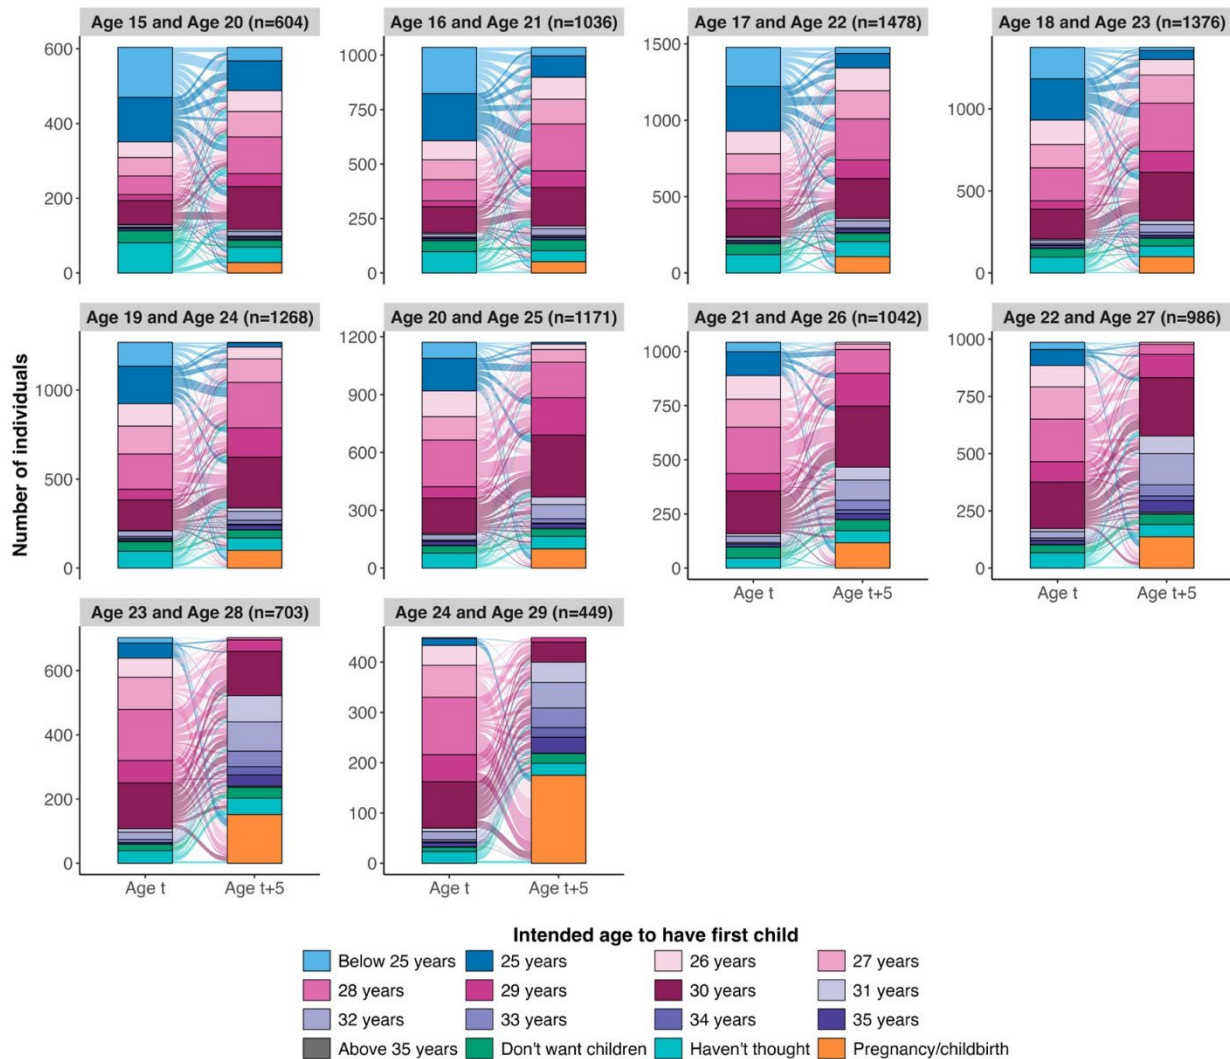

Figure S.2 Transitions in responses on the realistic intended age at first childbirth over five years among individuals who were childless at the start of the interval, with flows shown for all age pairs (1981–1983 birth cohort).

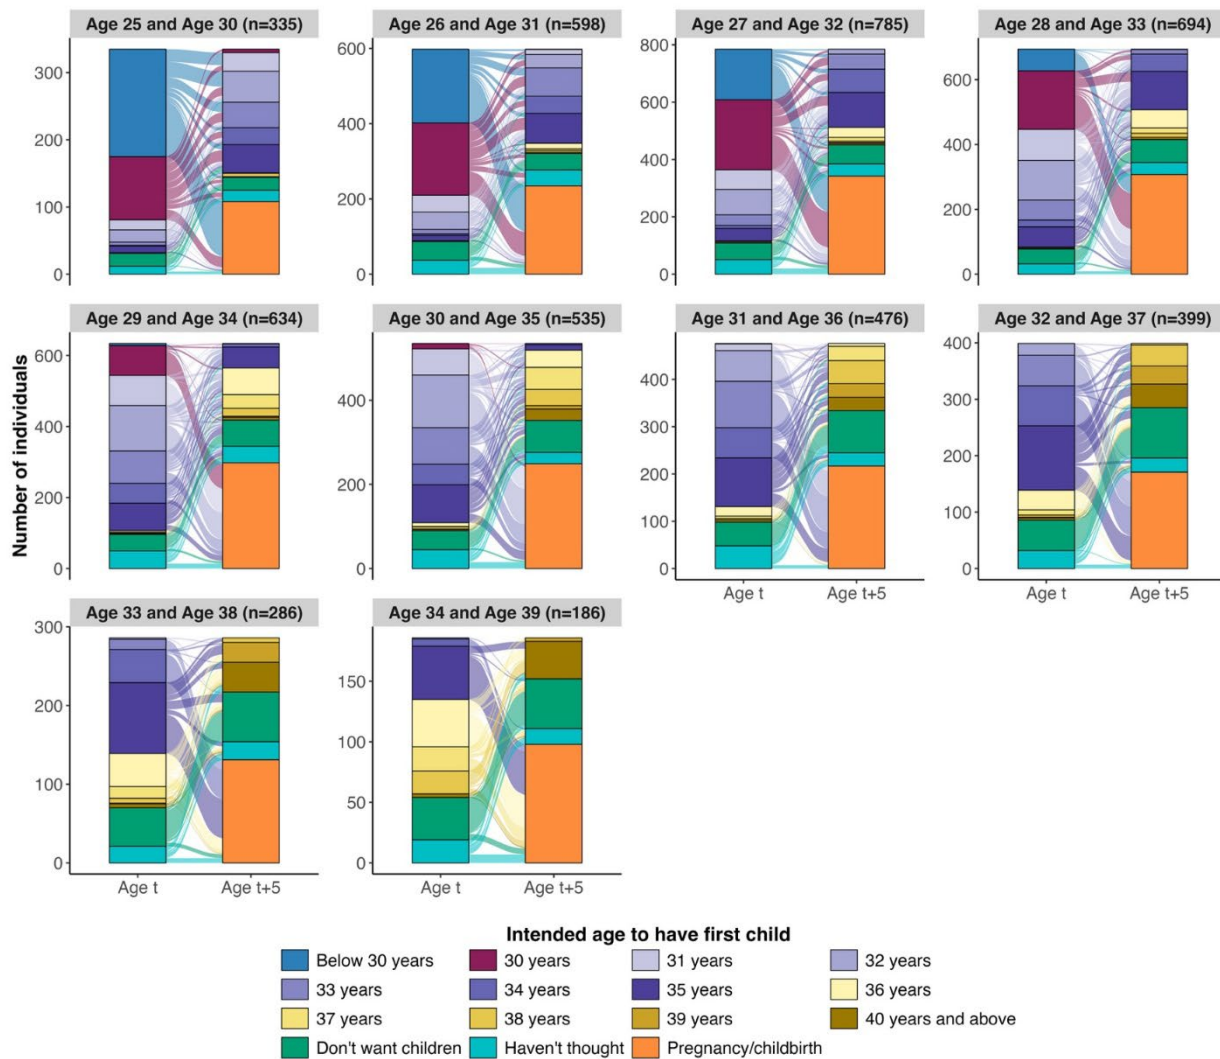

Figure S.3 Change in the intended childbearing age (distribution of response transition categories), by partnership transition and age group for both genders (1991–1993 birth cohort).

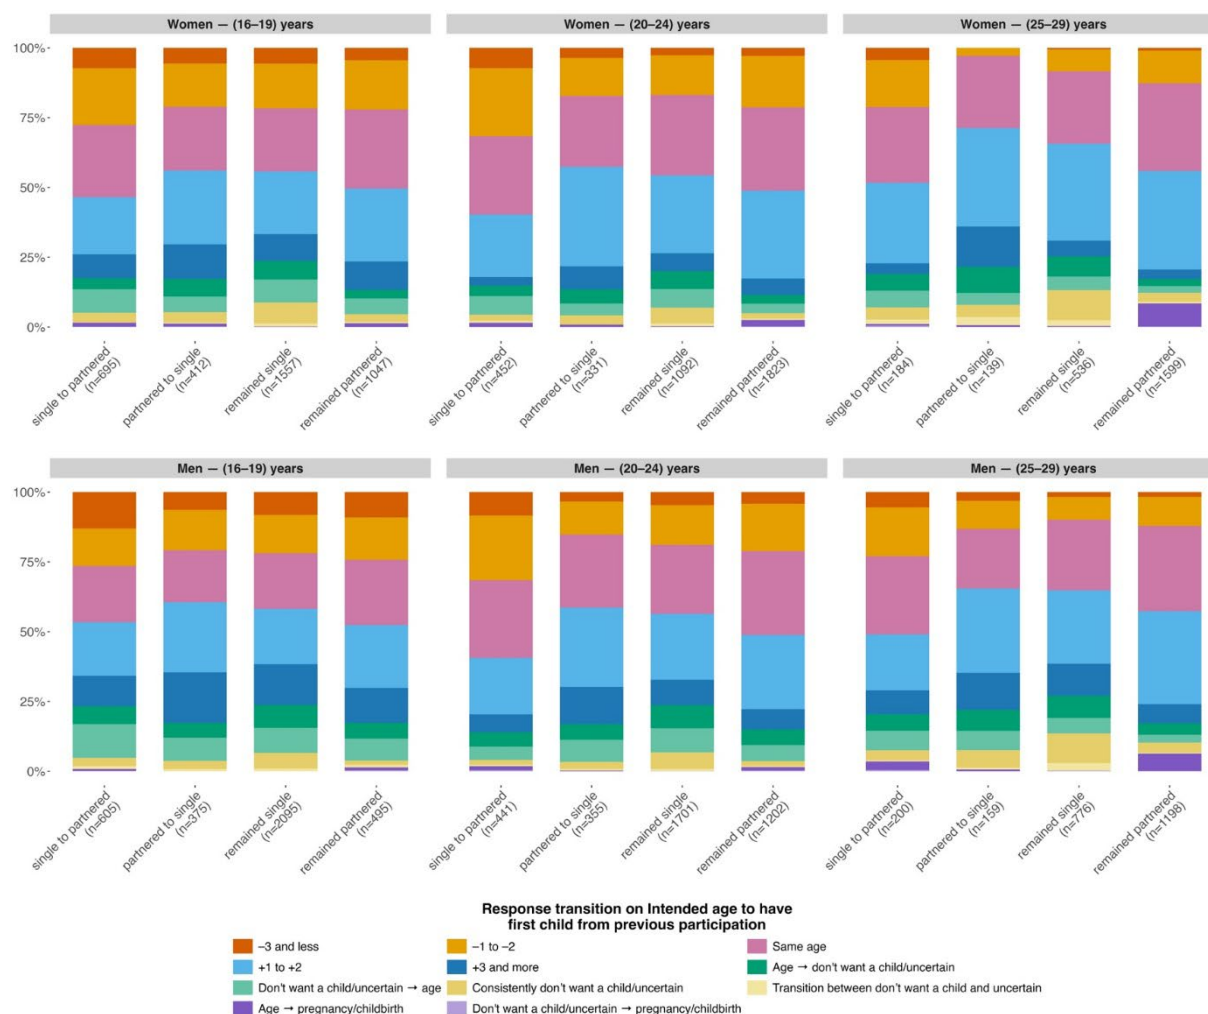

Figure S.4 Change in the intended childbearing age (distribution of response transition categories), by partnership transition and age group for both genders (1981–1983 birth cohort).
